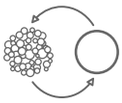
RED HAT JBOSS FUSE PERFORMANCE, SCALING, AND HA REVIEW

DATASHEET



BENEFITS

- Get real results from a proven framework and approach
- Increase performance, stability, and other qualities of service that are built into your infrastructure
- Scale and modify your application with the confidence to meet business objectives
- Increase in-house technical skills as your team works side-by-side with an expert

GROW TO MEET YOUR BUSINESS REQUIREMENTS

The Red Hat® JBoss® Fuse Performance, Scaling, and High Availability (HA) Review package helps users of Red Hat JBoss Fuse and Red Hat JBoss A-MQ with applications in production continue to get the most from their open source integration and messaging technology. In this intensive engagement, our consultant analyzes your deployment, facilitates acclimation, and fine-tunes your infrastructure to maximize manageability, security, reliability, and performance.

Red Hat Consulting is experienced in building large, mission-critical applications and is the company that makes it practical to integrate every facet of the business. No other group is as qualified to review your deployment and ensure you are getting the most from these open source projects.

HIGHLIGHTS

Upon close of the engagement, the service delivers:

- **Optimized configuration review** – Our consultant will help your team create concise, clear, and fully functional configuration artifacts for your system.
- **Structured recommendations** – All recommendations are documented as part of the on-site activity.
- **Up to 5 days on-site or off-site consulting for assessment** – Our consultant will work with your operations team, application owners, and developers to analyze, tune, and optimize your Red Hat JBoss Fuse infrastructure, making recommendations concerning management, security, reliability, and performance and instilling best practices.

GETTING THE MOST OUT OF YOUR REVIEW

To get the most out of your time with our consultant, we recommend an initial status meeting with the architect, project manager, and developers (up to 8 people) to determine and prioritize issues and define an agenda for the session. This will be followed by daily stand-up meetings to discuss progress, and a wrap-up meeting to discuss findings and outline recommendations and next steps.

Should there be any product issues, enhancement requests, or bugs, we recommend that they be logged with Red Hat Support as part of a Red Hat enterprise subscription.

PREREQUISITES

In preparation for your sessions, gather any design documentation, slides, or diagrams that will help our consultant better understand your environment and requirements. While working at your site, our consultant will need an Internet connection and power connection. Access to a meeting room with projector and whiteboard for breakout sessions is highly desirable.

ABOUT RED HAT

Red Hat is the world's leading provider of open source solutions, using a community-powered approach to provide reliable and high-performing cloud, virtualization, storage, Linux, and middleware technologies. Red Hat also offers award-winning support, training, and consulting services. Red Hat is an S&P company with more than 70 offices spanning the globe, empowering its customers' businesses.
