

JBoss Rules Framework Implementation Service

WHAT IS IT?

JBoss Rules is an open source and standards-based business rules engine for easy business policy access, change, and management. JBoss Rules is a fast, highly efficient rules engine that makes it easy for a business analyst or auditor to view business rules, as they are encoded in your IT application infrastructure, to verify that the encoded rules indeed implement the documented business policies. JBoss Rules also supports a variety of language and decision table inputs, making it easy to quickly modify business policies to respond to opportunities and competitive threats.

WHAT DOES IT DO?

JBoss Rules Framework has the following key features:

- Simplifies applications by separating business policy or rules logic from process, infrastructure, and presentation logic.
- Great way to collect complex decision-making logic and work with data sets too large for humans to effectively use.
- Facilitates knowledge transfer to centralized repositories and help combat issues due to the loss of key decision makers, managers, executives, specialists, and highly creative employees.
- Your business rules are separated from other logic, they can be more easily reused across many applications and in service-oriented architecture environments.

WHY SHOULD I CARE?

Why build your next generation middleware architecture on the same expensive, proprietary products? Attack your IT project backlog. Switch to JBoss Rules Framework for:

- **More Capability, Less Costs:** Delivered via subscription. So you pay for what's most important to you. Service. Software that works.
- **No Vendor Lock-in:** The development process is open. The technology is open. There are no secrets, no surprises, no lock-in.
- **Award-Winning Support:** Ranked highest in custom satisfaction over Oracle, IBM and BEA in an [independent study](#) 2 years running.
- **Modular Architecture:** Robust enough to handle large, complex JavaEE workloads, yet agile and flexible enough to run lighter ones.

JBoss Rules is a fast, highly efficient rules engine that makes it easy for a business analyst or auditor to view business rules.

SCOPE

The JBoss Rules Framework implementation service is typically delivered in 3 — 5 days. For more complex engagements, a separate statement of work may be necessary. For the 3 — 5 day JBoss Rules Framework implementation service, Red Hat will provide a technical consultant-- a Red Hat and JBoss Certified Consultant that performs the work, manages all stages of the engagement (day-to-day and long-term projects), provides full knowledge transfer, and completes any necessary documentation.

REQUIREMENTS

This project relies on having ready access to the personnel responsible for the development, deployment, and production support of the applications and infrastructure in question. It is critical that these individuals be involved in the planning phases of the project and available for information and assistance in later phases. More specifically, the customer will need to provide access to one or more of the following:

- **Project sponsor:** This person is the ultimate sign-off authority at the client, provides the high-level overview of long-term goals and objectives, and is typically an IT director.
- **Project manager:** This individual acts as the direct contact with Red Hat's technical consultant, manages the day-to-day client side activities, and ensures the timely delivery of information required for the project.
- **IT and other staff:** These people provide the information about the client's IT infrastructure and future requirements. Resources from development, operations, planning, purchasing, accounting, or finance may be incorporated into the project team or accessed via the project manager as appropriate.
