

JBoss Enterprise Portal Platform Implementation Service

WHAT IS IT?

Today's top enterprises look to achieve a competitive advantage by deploying enterprise portals within their IT infrastructure. JBoss Enterprise Portal Platform provides an integrated open source platform for hosting and serving a portal's web interface, aggregating, publishing, and managing its content, and personalizing its experience.

WHAT DOES IT DO?

JBoss Enterprise Portal Platform has the following key features:

- Provides a framework for centralized and secure access to applications and information, which fosters collaboration, streamlines business processes, and reduces costs.
- Based on open standards, it can incorporate components into the portal as standardized and reusable portlets. So it meets the needs of business to employee, business to customer, or business to business portals.
- Based on the market-leading JBossApplication Server, so access to dynamic information is simple. Performance and scalability are assured.
- Providing an integrated user interface across applications, JBoss Portal Platform makes it easier for users to leverage existing IT applications, increasing return on investment of IT assets and reducing the need for new application and integration development.

WHY SHOULD I CARE?

Why build your next generation middleware architecture on the same expensive, proprietary products? Attack your IT project backlog. Switch to JBoss Enterprise Portal Platform for:

- **More Capability, Less Costs:** Delivered via subscription. So you pay for what's most important to

you. Service. Software that works.

- **No Vendor Lock-in:** The development process is open. The technology is open. There are no secrets, no surprises, no lock-in.
- **Award-Winning Support:** Ranked highest in custom satisfaction over Oracle, IBM and BEA in an [independent study](#) 2 years running.
- **Modular Architecture:** Robust enough to handle large, complex JavaEEworkloads, yet agile and flexible enough to run lighter ones.

JBoss Enterprise Portal Platform provides an integrated open source platform for hosting, serving a portal's web interface, managing its content, and personalizing its experience.

SCOPE

The JBoss Enterprise Portal Platform implementation service is typically delivered in 3 — 5 days. For more complex engagements, a separate statement of work may be necessary. For the 3 — 5 day JBoss Enterprise Portal Platform implementation service, Red Hat will provide a technical consultant-- a Red Hat and JBoss Certified Consultant that performs the work, manages all stages of the engagement (day-to-day and long-term projects), provides full knowledge transfer, and completes any necessary documentation.

REQUIREMENTS

This project relies on having ready access to the personnel

responsible for the development, deployment, and production support of the applications and infrastructure in question. It is critical that these individuals be involved in the planning phases of the project and available for information and assistance in later phases. More specifically, the customer will need to provide access to one or more of the following:

- **Project sponsor:** This person is the ultimate sign-off authority at the client, provides the high-level overview of long-term goals and objectives, and is typically an IT director.
- **Project manager:** This individual acts as the direct contact with Red Hat's technical consultant, manages the day-to-day client side activities, and ensures the timely delivery of information required for the project.
- **IT and other staff:** These people provide the information about the client's IT infrastructure and future requirements. Resources from development, operations, planning, purchasing, accounting, or finance may be incorporated into the project team or accessed via the project manager as appropriate.
