

# RED HAT NETWORK SATELLITE IMPLEMENTATION SERVICE

## WHAT IS IT?

The Red Hat Network Satellite Implementation Service is a 3–5 day fixed price service that installs, configures, customizes, and optimizes Red Hat Network Satellite in your IT environment.

## WHAT DOES IT DO?

The Red Hat Network Satellite implementation service accelerates time to value, reduces risk, and enables you to refocus your limited IT resources from configuring tools to delivering a stable, consistently available IT infrastructure.

## WHY SHOULD I CARE?

Red Hat Network Satellite brings all the functionality of Red Hat Network behind your firewall, enabling premium system management with maximum control, security, and flexibility. The Red Hat Network Satellite implementation service is a low cost, low risk, high return on investment way to maximize the value of Red Hat Enterprise Linux and Red Hat Network Satellite.

## DELIVERABLES

<b>Fast Implementation</b>	Red Hat Certified Consultants have performed this service countless times and have developed proven methodologies and best practices to ensure fast completion.
<b>Optimization/Customization</b>	Every customer environment is a little bit different. Optimizing Red Hat Satellite for your specific environment is key to reaping maximum benefit. This may include customizing Red Hat Satellite to distribute third party to your Red Hat Enterprise Linux systems.
<b>Knowledge Transfer</b>	Comprehensive knowledge transfer from Red Hat Certified Consultants at the engagement conclusion ensure that your IT staff learns firsthand how to operate, administer, and maximize the value of Red Hat Satellite.

## SCOPE

The Red Hat Network Satellite implementation service is typically delivered in 3–5 days. For more complex engagements, a separate statement of work may be necessary. For the 3–5 day Red Hat Network Satellite implementation service, Red Hat will provide a technical consultant – A Red Hat Certified Consultant that performs the work, manages all stages of the engagement (day-to-day and long-term projects), provides full knowledge transfer, and completes any necessary documentation.

## REQUIREMENTS

The customer will need to provide access to one or more of the following:

- Project sponsor: This person is the ultimate sign-off authority at the client level, provides overview of long-term goals and objectives, and is typically an IT director.
- Project manager: This individual is in contact with Red Hat's technical consultant, manages the day-to-day client-side activities, and ensures the timely delivery of information required for the project.
- IT and other staff : These people provide the information about the client's IT infrastructure and future requirements. Resources from development, operations, planning, purchasing, accounting, or finance may be incorporated into the project team or accessed via the project manager as appropriate.

Please note that customers who wish to leverage a database other than the Oracle database embedded with Red Hat Network Satellite must possess a valid database license. Customers must also possess valid Red Hat Network Satellite Management entitlements for they systems you wish to manage.
