

# RED HAT ENTERPRISE VIRTUALIZATION FOR SERVERS: PRICING QUICKGUIDE

## RED HAT ENTERPRISE VIRTUALIZATION FOR SERVERS SUBSCRIPTION MODEL

Red Hat Enterprise Virtualization for Servers subscription pricing is based on the number of managed sockets, providing customers with a straightforward model for ordering, deployment, and capacity planning. There are no licensing limitations on the total number of cores per host, and management is included. Licensed sockets can run unlimited virtual guests, but customers must purchase the licenses for operating systems (Red Hat or others) separately.

FIGURE 1

## CHOOSING A RED HAT HYPERVISOR

Red Hat Enterprise Virtualization offers two choices for hypervisor: a small-footprint hypervisor, Red Hat Enterprise Virtualization Hypervisor, that is bundled with Red Hat Enterprise Virtualization for Servers, or Red Hat Enterprise Linux, purchased separately.

### CHOOSE RHEV-H

If you want a small, PXE bootable, zero management hypervisor

If you are running Windows only or a small number of RHEL guests

If you want to do all of your host management from the RHEV-M management interface

If you want to install your hypervisor hosts with little or no Linux expertise

### CHOOSE RHEL

If you want a full RHEL operating system on your hypervisor hosts

If you need to install third-party drivers or agents

If you want to use a single standard RHEL image on all of your hypervisor hosts and bare metal RHEL servers

If you want to run bare metal RHEL applications and VMs side-by-side

## USING RED HAT ENTERPRISE LINUX AS A HYPERVISOR

For customers who want to host Red Hat Enterprise Virtualization on a full Red Hat Enterprise Linux instance, Red Hat Enterprise Linux can be used as a host for virtual machines. A Red Hat Enterprise Linux subscription is required for each host in this model, in addition to the Red Hat Enterprise Virtualization for Servers subscription.

## RED HAT ENTERPRISE VIRTUALIZATION FOR SERVERS TCO CALCULATOR

To assist customers in sizing and ordering the correct number of licenses, Red Hat has developed a web-based configurator for Red Hat Enterprise Virtualization for Servers. With it, you can enter the number and type of virtual machines you need to virtualize, and the configurator will calculate the number of hosts and a bill of materials for Red Hat Enterprise Virtualization and Red Hat Enterprise Linux products. For more information, see [www.redhat.com/rhev/server/cost](http://www.redhat.com/rhev/server/cost).

The Red Hat Enterprise Linux and Red Hat Enterprise Virtualization product offerings, pricing, and terms and conditions are based on United States published retail pricing, and are subject to change and local pricing. Pricing for non-Red Hat guest operating systems is based on published retail pricing in the United States and is subject to change and local pricing.

For more information on Red Hat Enterprise Virtualization pricing and configuration, please contact your local Red Hat sales office or Red Hat authorized reseller.

## ABOUT RED HAT

Red Hat, the world's leading provider of open source solutions and an S&P 500 company, is headquartered in Raleigh, NC with over 65 offices spanning the globe. CIOs ranked Red Hat as one of the top vendors delivering value in Enterprise Software for six consecutive years in the CIO Insight Magazine Vendor Value survey. Red Hat provides high-quality, affordable technology with its operating system platform, Red Hat Enterprise Linux, together with virtualization, applications, management and Services Oriented Architecture (SOA) solutions, including Red Hat Enterprise Virtualization and JBoss Enterprise Middleware. Red Hat also offers support, training and consulting services to its customers worldwide. Learn more:
