

The CIO's alternative

Enterprise open source options for complex business challenges

Building a better foundation for the future of IT

Red Hat is the world's leading provider of enterprise open source software solutions and services. We use a community-powered approach to deliver innovative yet reliable Linux®, hybrid cloud, and container technologies. Red Hat helps customers develop cloud-native applications, integrate existing and new IT, and automate, secure, and manage complex environments.

As flexibility to adapt to ever-changing, unpredictable market conditions remains essential to modern business, enterprise open source offers a valuable alternative to proprietary software development models.

Often, vendors of proprietary software limit options to their ecosystem, with lock-in that makes switching technologies time-consuming and costly. Red Hat does things differently. We offer flexibility and choice across a comprehensive portfolio—including integration with a broad ecosystem of certified partners—to help you find the right technology for your business goals and challenges.
