

RED HAT CONSULTING BRMS SERVICES

JBoss® Enterprise Business Rules Management System (BRMS) is an open source business rules management system that simplifies business policy and rules development, access, and change management. JBoss Enterprise BRMS includes a powerful, highly efficient rules engine together with an easy-to-use rules development environment, a rules management system, and rules repository. JBoss Enterprise BRMS helps organizations deploy highly sophisticated rules-based solutions in support of applications, SOA deployments, and business processes more rapidly and at a lower development cost.

Understanding JBoss BRMS prior to implementation helps any organization exploit BRMS features more quickly and efficiently. Without appropriate preparation, customer implementations may not take advantage of the full power of the software to express their rules and policies. It is equally important for customers to understand the policies they wish to instantiate within the system. That requires both preparation and analysis.

In response, Red Hat has developed a set of services that are designed to help organizations use the full capability of the JBoss rules platform. Red Hat® Consulting BRMS services collectively provide a foundation for your business by allowing technology teams to fully realize the power of the JBoss Enterprise BRMS system.

Red Hat Consulting BRMS services are delivered in three segments:

System and organizational readiness

- Architecture of BRMS technology platform
- Set up of the BRMS system
- Identification of business owners

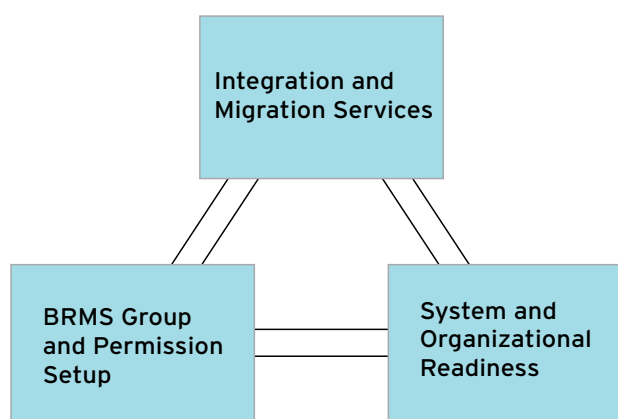

BRMS group and permission setup

- Business rules architecture and design
- Selection of rules types (e.g. BRL, DRL, decision tables)
- Mentoring on rules creation
- Mentoring on fact model creation

Integration and migration services

- Integration between the line-of-business (LOB) application and the BRMS
- Extraction of business logic from non-rules-based, legacy applications
- Migration of rules sets from existing third-party rules platforms
- Optimization of the existing software development life-cycle for BRMS integration

BRMS SERVICE SEGMENTS

BENEFITS

- Reduces cost and risk of adoption of or migration to the JBoss BRMS platform
- Establishes a consistent rules architecture to help avoid future performance and uptime issues
- Provides mentoring and guidance to organizations adopting new business rules technologies or migrating systems
- Serves as a bridge between business and technical users, helping both teams fully realize the power of the JBoss BRMS system
- Identifies ownership within your organization related to business rules maintenance
- Ensures the teams receive mentor-based training in the:
 - Creation and maintenance of rules
 - Testing and deployment of rules
 - Integration of rules with existing systems and services

ABOUT RED HAT CONSULTING

Red Hat Consulting delivers a range of middleware professional services from strategic solutions to product-aligned engagements. Our global middleware practice team is comprised of enterprise architects with deep experiences integrating JBoss Enterprise Middleware with other open source and proprietary software. This broad technology experience enables Red Hat Consulting to assist our clients with complex integration, migration, and solutions development efforts.
