

JBoss Enterprise Middleware Cloud Services

ENSURING OPTIMAL DEPLOYMENTS OF JBOSS SOLUTIONS IN THE CLOUD

Finding ways to gain operating efficiency is essential for any competitive organization. Cloud computing gives organizations an edge by providing flexibility, efficiency, and elasticity of computing resources.

Deploying JBoss® Enterprise Middleware in the cloud provides a cost-effective solution for organizations developing applications, and seamlessly integrates them with existing heterogeneous environments and deploys them to a cloud infrastructure. To help organizations optimally deploy a JBoss Enterprise Middleware solution in the cloud, Red Hat Consulting offers its JBoss Enterprise Middleware Cloud Services.

SCOPE

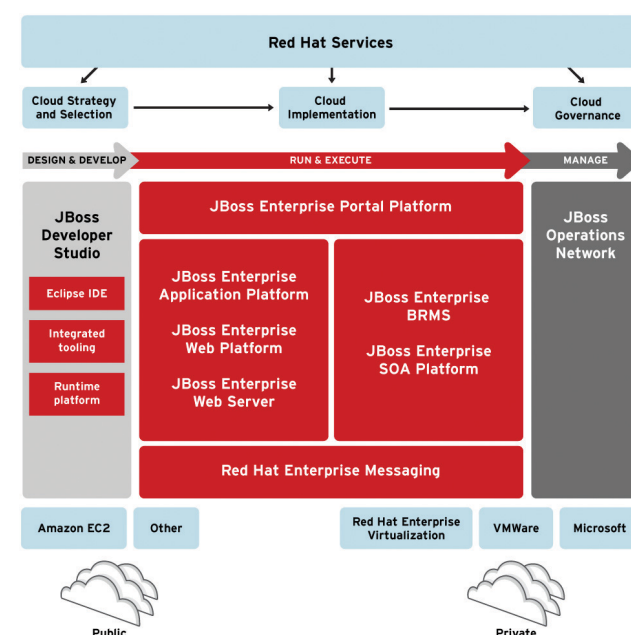

Delivered by the Red Hat's Consulting middleware practice, this engagement provides strategic recommendations and on-site technical expertise to set up middleware as a service in your cloud environment.

The engagement provides you with:

- Strategic deployment recommendations and implementation roadmap
- Cloud provider evaluations
- Platform-as-a-Service (PaaS) custom setup
- Cloud-based application implementation
- Cloud security and monitoring
- Cloud governance

The engagement delivers long-term strategic results by mentoring of in-house staff on cloud environments, sharing industry accepted practices for using the cloud, and assistance with implementation. Each Red Hat cloud engagement is deliverables-based, actively engaging in-house teams and ensuring new cloud environments and cloud based applications can be enhanced and maintained after the engagement ends.

RED HAT SERVICES DIAGRAM

BENEFITS

- Deploys a cost-effective solution that helps organizations easily stand up applications and dynamically scale them on-demand.
- Reduces costs by making more efficient use of in-house servers, moving to a "pay-as-you-use" model for outsourced infrastructure, or adopting a hybrid of both.
- Combines the use of open source based JBoss solutions with the flexibility of a cloud environment.
- Accelerates time-to-market for applications.
- Mentors staff to reduce the time and effort adopting and implementing a cloud solution.

RED HAT CLOUD FOUNDATIONS

Red Hat Cloud Foundations provides everything needed to help plan, build, and manage a private cloud today. Red Hat delivers the most complete and comprehensive cloud solutions on the market, with the flexibility that comes only from the open source leader.

JBoss PLATFORMS

JBoss Enterprise Middleware is a comprehensive portfolio of middleware software for building and deploying composite applications into private and public clouds. JBoss provides a series of modular and lightweight application platforms for cloud environments that enables organizations to select the most appropriate language, programming model, or component model for their cloud deployment. JBoss integration platforms enable organizations to deploy, manage, and orchestrate cloud-based services into composite applications. JBoss presentation services enable users to create user interaction capabilities composed of disparate cloud services.

ABOUT RED HAT CONSULTING

Red Hat Consulting delivers a range of middleware professional services offerings, from product-aligned services to strategic solutions. Our global middleware practice team is comprised of enterprise architects with deep experience integrating JBoss Enterprise Middleware with other open source and closed source software. This broad technology experience enables Red Hat Consulting to assist its clients with complex integration, migration, and solutions development efforts.
