JBOSS ENTERPRISE MIDDLEWARE HEALTHCHECK SERVICE

Validate your installation and uncover opportunities for increased efficiency and cost savings

BENEFITS

- Identifies opportunities to improve JBoss Enterprise Middleware Platform performance, security, and efficiency

- Uncovers configuration, update, security, or performance issues that ultimately impact your business

- Provides recommendations for further improvements

- Creates formalized documentation about your configuration

Architecture decisions, misconfigurations, patch oversights, security updates, and other routine adjustments can all impact the performance, vulnerability, and the overall health of any enterprise application. Conducting a comprehensive review of your JBoss installation and configuration validates your choices and uncovers areas where you can extract greater performance, security, management, and feature maximization.

JBOSS ENTERPRISE MIDDLEWARE HEALTH CHECK SERVICE

A JBoss Enterprise Middleware Healthcheck helps ensure that your JBoss Enterprise Application Platform is operating at maximum security and efficiency, by helping to identify configuration, update, security, or performance issues that ultimately impact your business.

Properly implemented, configured, and tuned infrastructure delivers better application performance and is simply less expensive to operate in production. A JBoss EAP Healthcheck will not only help answer these questions but also optimize your configuration where possible and provide recommendations for further improvements. Knowing that proven practices are applied to your environment can help promote net improvements to total cost of ownership and return on your IT investment, while improving end user experience.

Developed by professionals with unparalleled expertise in open source technology and best practices, the service ensures a stable, consistently available management infrastructure configured and optimized for your needs.

REQUIREMENTS

To ensure a smooth service delivery, the following people from your organization should be available to work with the consultant during the engagement:

- **Sponsor:** This person provides guidance and an escalation point, should one be necessary, and is your ultimate sign-off authority for fixed-price consulting engagements.

- **Project manager:** This person manages your day-to-day activities related to the engagement and ensures the timely delivery of information required for the project.

- **IT and other staff:** These people are your IT and other professionals who provide relevant information about your IT infrastructure and your JBoss configuration and usage.

The following technical requirements should be met prior to the start of the engagement[1]:

• A valid JBoss Enterprise Application Platform subscription

• Root or administrative access to the target host for the Healthcheck

• Documentation on your JBoss infrastructure

• Details of all third-party and Red Hat software installed on the host

SUCCESS PATHS

Enterprises today need to achieve a new level of operating efficiency that is significantly leaner that what they have today. The JBoss Enterprise Middleware Healthcheck is an optimal first step on your path to increased IT efficiency. Red Hat's full portfolio of middleware accelerator services offers ongoing opportunities for operational cost savings and improved IT productivity. These middleware infrastructure accelerator services, including BRMS, SOA, and middleware migration services, help customers make smart architectural decisions from the start, optimize application performance, and identify opportunities for cost savings.

1 Clients may need to satisfy a more detailed checklist of requirements prior to commencement of an engagement.
