NASA & Ansible Tower

About NASA

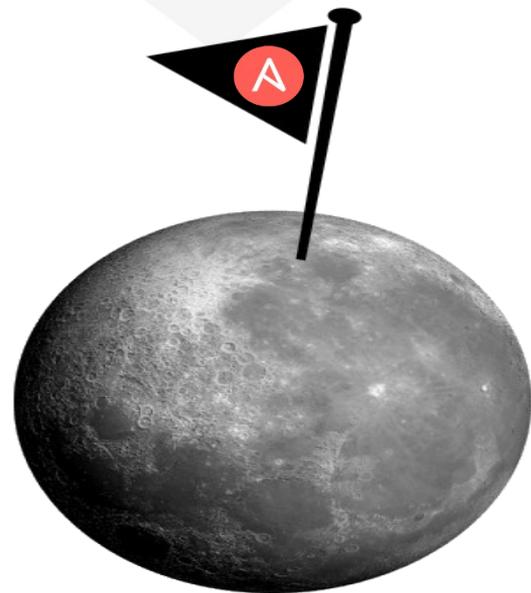

- ▶ NASA's web infrastructure – WestPrime.
- ▶ Tech in play -
LifeRay, MongoDB, Acronis, AWS ...
- ▶ 50% Ubuntu, 35% Redhat,
5% Amazon Linux, 10% Windows.

About NASA

**THEY PUT
MEN
ON THE
MOON !**

The Challenge

- Ⓐ Migrating 110 websites & apps to Amazon in 22 weeks.
- Ⓐ Updating the old.
- Ⓐ Servers not updated = **Vulnerable.**

The Challenge Continues

- **No working, just talking.**
- **Everything was manual, following tasks documents.**
- **With time – started using shell scripts.**
- **Simple things were extremely burdensome.**

Ansible to the rescue !

Before Tower

Ansible Core:

Ⓐ Simple. Agentless. Powerful.

Ⓐ For scheduling – use cron. Lots of cron.

Ⓐ Logs dispersed.

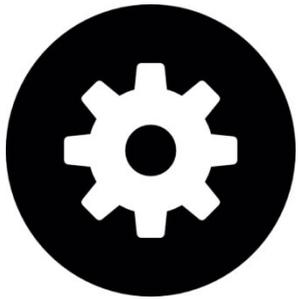

With Tower

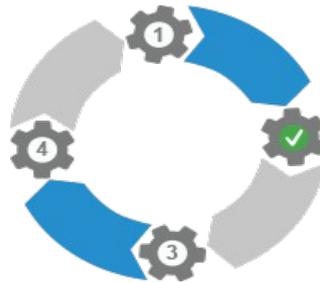

- **Access Control – Organizations, Teams, Users.**
- **Built-in Logging.**
- **Non-technical Friendly.**
- **Tower Scheduler > Cron.**

Have You Met Tower?
