Predictive IT analytics
Gain comprehensive analytics across physical, virtual, container, and private and public cloud environments. Know about vulnerabilities before they affect your environment.

Automated remediation
Quickly resolve critical security risks using Ansible Playbooks.

Automated expert assessment
Take advantage of real-time visibility of hybrid environments to identify and fix pending outages and issues faster.

Rapid time to value
Deploy and scale quickly with no additional infrastructure requirements. Teams can immediately initiate tailored remediation steps to avoid downtime and optimize security.

Minimize human error
Mitigate security threats with tailored, easy-to-follow remediation steps.

Product overview
As existing workloads evolve and deployments grow in size and complexity, risk management is a key challenge for enterprise IT. To succeed, operations departments need to rapidly deploy new environments and ensure that systems scale reliably. Red Hat® Insights helps customers benefit from the experience and technical knowledge of Red Hat Certified Engineers (RHCEs®) and makes it easier for users to identify, prioritize, and resolve issues before business operations are affected.

Red Hat Insights provides proactive analytics across complete, hybrid infrastructures. It also is now included in all supported versions of Red Hat Enterprise Linux®, enabling users to detect issues, enhance visibility into their deployments, improve security, and prescribe remediation through tools like Red Hat Satellite.

Delivered as a Software-as-a-Service (SaaS) offering, Red Hat Insights takes advantage of Red Hat’s expertise as a leader in open source software to generate tailored remediations in real time. Red Hat Insights uses intelligent data to pinpoint technical risks and help IT resolve problems before business is affected. This modern, integrated platform supports operational analytics and automated resolution across physical, virtual, container, and private and public cloud environments.

Benefits
Red Hat Insights provides ongoing, in-depth analysis of an organization’s Red Hat infrastructure to proactively identify key threats to security, performance, and stability. By combining granular risk assessment, tailored remediation steps, and automated resolution, Red Hat Insights transitions IT from reactive to proactive and intelligent infrastructure management.
