# What problem am I solving?

**1**

**Fast feedback for my business**

**2**

**Collect business metrics**

**3**

**Deliver customer metrics to  
different systems**

**4**

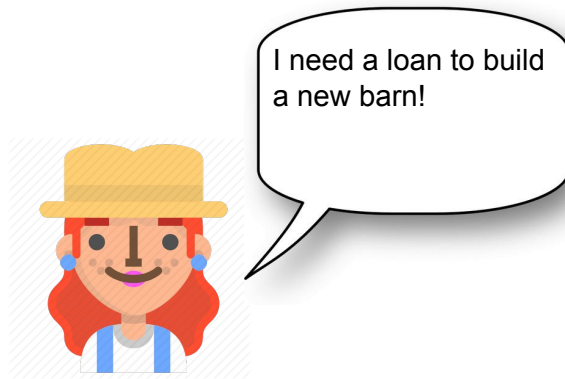

**Data patterns to support  
business decisions**

# Use Case

## Agricultural Claim Fund Application form

Tyrion Lannister

Sansa Stark

# Use Case

## Agricultural Claim Fund Application

Our example is government grant fund. In our pretend country we want to give money to farmers based on our central government budget per region

We care about funding distribution per geographical regions

**Sending a few farm fund applications data to kick off Claim Fund processes.**

**PAM task will be created with status Pending, then the staff members will decide if the loan will be approved or rejected.**

**Business information was sent to Apache Kafka during the application process which will be displayed via Grafana for analysis.**

# Analysing data

**CUSTOM METRICS**

**COLLECT VALUABLE DATA**

**FEED EXTERNAL SYSTEMS**

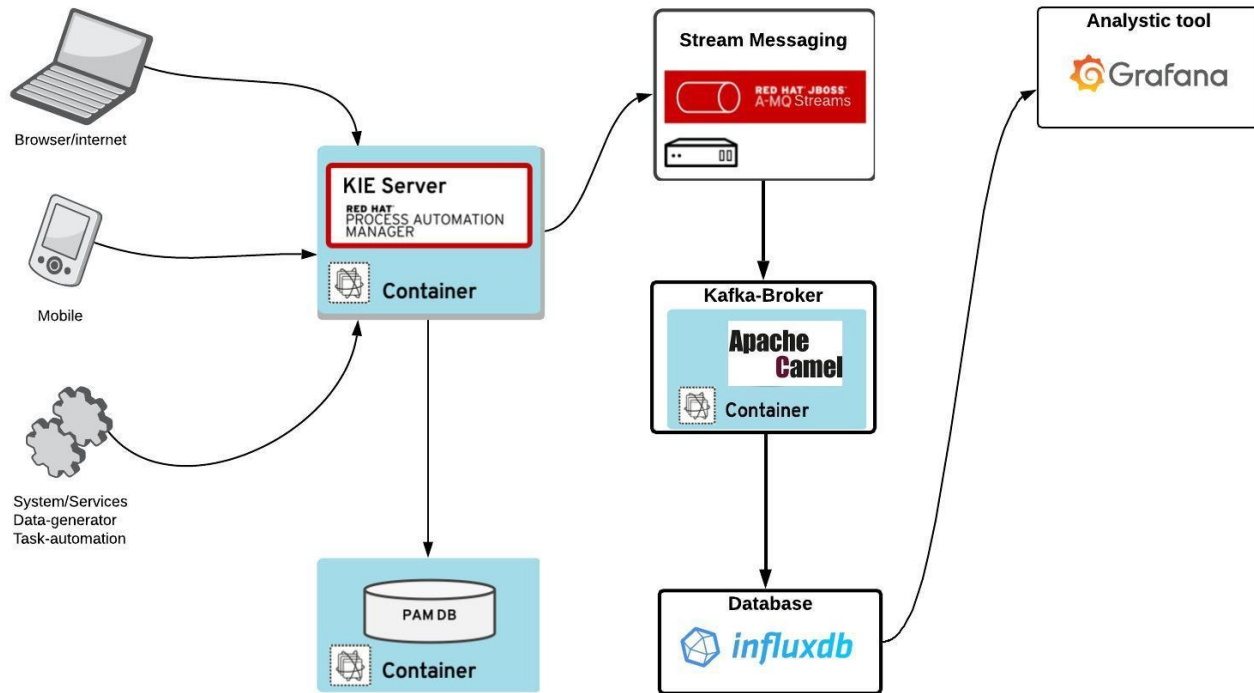

**DISPLAY METRICS FOR ANALYSIS**

**FACTS TO SUPPORT DECISIONS**

**IMPROVED BUSINESS PROCESSES**

# Overview solution diagram

# Deploying on OpenShift Container Platform

# OpenShift Container Platform

- Platform as a Service tooling
- Foundation to deploy our application
- We will deploy Red Hat Process Automation Kie Server, Red Hat AMQ Streams, Grafana and other components

<https://drive.google.com/open?id=1O08HNSqvvukHBdQj4UxKq7IjuIWF9IZf>

# PROCESS AUTOMATION MANAGER

## Business Automation Portfolio

### RED HAT® DECISION MANAGER

Complex event  
processing

Business rules

Business optimization

### RED HAT® PROCESS AUTOMATION MANAGER

Process/Case  
management

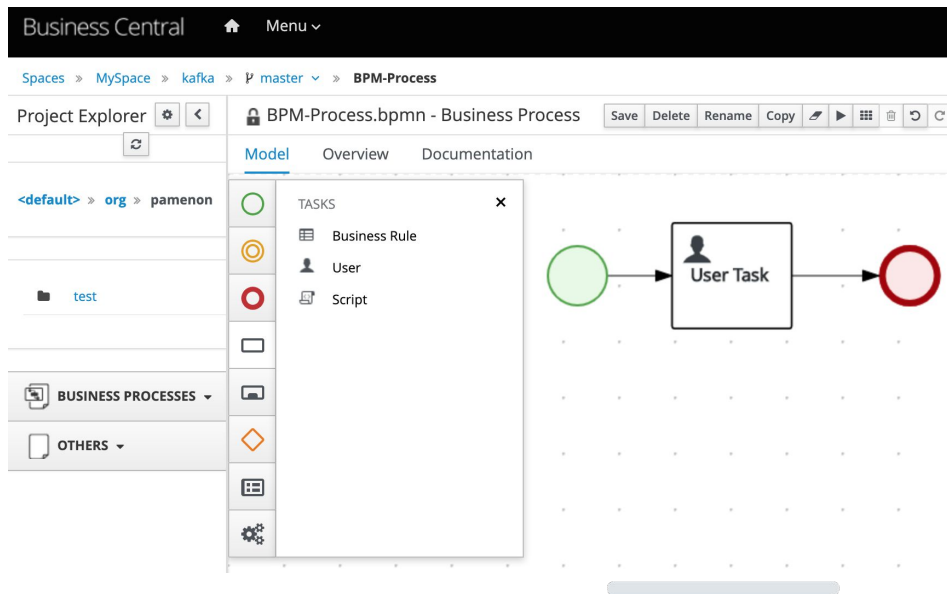

Entando UX  
platform

# PROCESS DESIGNER

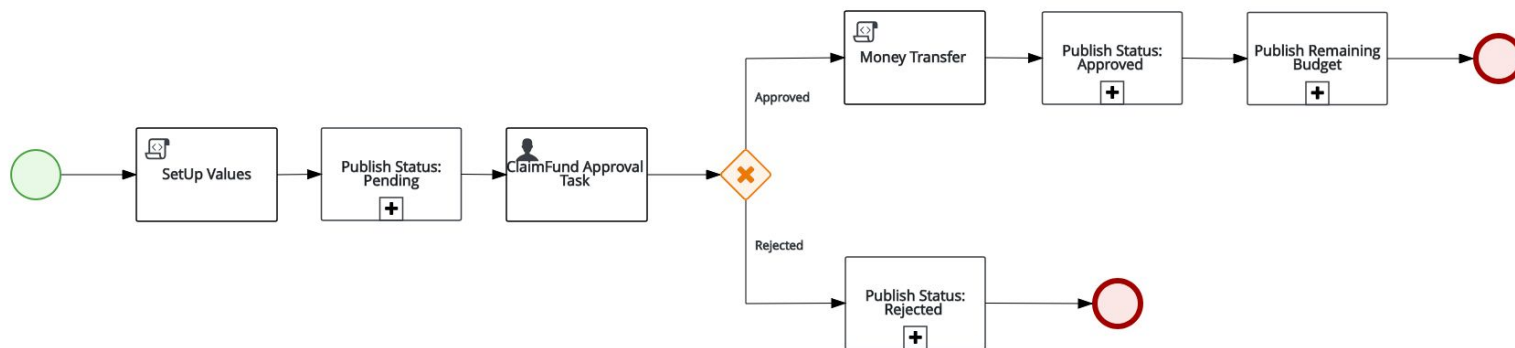

## Seamless process modeling

- Based on BPMN v2 spec
  - Process Execution compliant
- Extensible Palette with custom services
- Case Management extensions
  - Case file
  - Case roles
  - Milestone task
- Form generation
- Export to PNG, PDF, SVG, BPMN2

# Claim Fund Process

MANAGER

# PROCESS AUTOMATION

## Integration using Work Item Handler (Publish Kafka Messaging node)

### Service task component list

	CamelSQLConnector	Use Apache Camel connectors in your processes Execute SQL query at a Camel endpoint and retrieve results	<input type="checkbox"/> OFF 0
	CamelXSLTConnector	Use Apache Camel connectors in your processes Process a message using an XSLT template	<input type="checkbox"/> OFF 0
	DecisionTask	Execute business rule or service tasks Execute a DMN decision task	<input checked="" type="checkbox"/> ON 0
	Email	Send an email Send email	<input checked="" type="checkbox"/> ON 0
	JMSSendTask	Send JSM messages Send JMS Message	<input checked="" type="checkbox"/> ON 0
	KafkaPublish	publish kafka messages from a process Publish message to a kafka topic	<input checked="" type="checkbox"/> ON 0

# PROCESS AUTOMATION

## Integration using Work Item Handler (Custom node)

- Available as maven archetype  
jbpm-workitems-archetype
- You can change names,  
implement your own code,  
build it
- Install the jar file on Business  
Central
- It will be ready to use on your  
process

```

package org.pamenon.custom.workitem;

import java.util.HashMap;

@Wid(widfile="MyWorkItemDefinitions.wid", name="MyWorkItemDefinitions",
    displayName="MyWorkItemDefinitions",
    defaultHandler="mvel: new org.pamenon.custom.workitem.MyWorkItemWorkItemHandler()",
    documentation = "custom-workitem/index.html",
    category = "custom-workitem",
    icon = "icon.png",
    parameters={
        @WidParameter(name="SampleParam", required = true),
        @WidParameter(name="SampleParamTwo", required = true)
    },
    results={
        @WidResult(name="SampleResult")
    },
    mavenDepends={
        @WidMavenDepends(group="org.pamenon", artifact="custom-workitem", version="1.0.0-SNAPSHOT")
    },
    serviceInfo = @WidService(category = "custom-workitem", description = "${description}",
        keywords = "",
        action = @WidAction(title = "Sample Title"),
        authinfo = @WidAuth(required = true, params = {"SampleParam", "SampleParamTwo"},
            paramsdescription = {"SampleParam", "SampleParamTwo"},
            referencesite = "referenceSiteURL")
    )
)

public class MyWorkItemWorkItemHandler extends AbstractLogOrThrowWorkItemHandler {

    public void executeWorkItem(WorkItem workItem,
        WorkItemManager manager) {

        try {
            RequiredParameterValidator.validate(this.getClass(),
                workItem);

            // sample parameters
            String sampleParam = (String) workItem.getParameter("SampleParam");
            String sampleParamTwo = (String) workItem.getParameter("SampleParamTwo");

            // complete workitem impl...
```

RED HAT  
PROCESS AUTOMATION  
MANAGER

# Kafka Process Integration

- Part of services task list
- Reusable integration node
- Configurable way to publish messaging

**RED HAT**  
PROCESS AUTOMATION  
MANAGER

# Apache Kafka

**STRIMZI**

- Publish/Subscribe messaging system
- Deployed using Red Hat AMQ Streams
- Topics are defined as objects inside of OpenShift
- Cluster is formed of brokers and zookeeper. Messaging entity operator deploys topics into the cluster

**RED HAT®**  
**AMQ**

# Red Hat AMQ

**RED HAT®**  
**AMQ**

# InfluxDB

- Time series data store, this is our “external” system for metrics
- Two series of data: loan\_updates and budget\_updates
- It is FAST and easy to use with Grafana

# Other components

**kafka-broker**

Deployed on Openshift

Kafka-broker listens to the message queues and updates influxdb

# Other components

## Data-generator

Running local

Sending data to  
Start process

Generate random data sets to send into PAM claim fund process via rest

## Task-automation

Running local

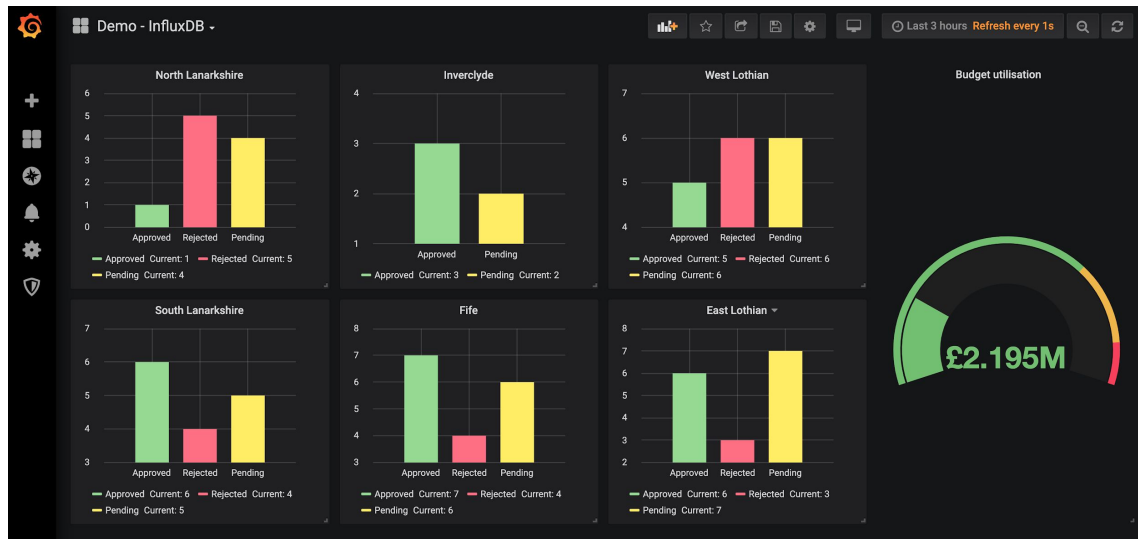

Managing Tasks

Simulate user task completion which may approve or reject the customer application

# Grafana

- Visualisation of our data
- Real-time feedback from our process
- Fast, client side rendering
- Open source analytic tool

# DEMO

# Conclusion

**Red Hat PAM is flexible, configurable,  
microservice, cloud supported**

**Red Hat AMQ Stream is faster, easy to  
integrate, cloud supported**

**Collect valuable business data from your  
process to improve business decisions**

**Real time data analyses**
