

Travelling towards a digital future

Two thirds of organizations turning over \$100m or more have significantly advanced their plans for digital transformation, according to data gathered by Red Hat. A fifth of them are accelerating these efforts, despite the complications of coronavirus, lockdowns and remote working.

Cloud technologies and infrastructure were among the most common areas of focus. This should not be surprising: investment here has been shown to facilitate more agile business practices, reduce costs, and increase organizations' ability to respond to change at speed. Why? Because cloud is key to containerization and building out a fully fledged ecosystem for the future.

Why you should opt for Red Hat

The Red Hat OpenShift ecosystem

50%
of top Fortune 100 companies
are using Red Hat OpenShiftⁱ

200+
products ready for
direct deployment

2,000+
of the world's most innovative
organizations are running on
Red Hat OpenShift
