

75%
of organizations

will have deployed a multi-cloud or hybrid cloud model by 2020*

*Gartner, Inc., Market Insight: Making Lots of Money in the New World of Hybrid Cloud and Multicloud, September 7, 2018

58%
of enterprises

are moving to hybrid IT environments that integrate on-premises systems and off-premises cloud and hosted environments**

**451 Research Voice of the Enterprise Cloud, Hosting and Managed Services Budgets and Outlooks, 2017

Your challenges

- » **Lack of flexibility** to manage these systems on-premises or in the cloud
- » **Difficulty** in ensuring that systems are always up to date and easily scalable
- » **Complexity** of managing systems in a hybrid and multi-cloud environment
- » **Proactively monitoring** analyzing, and remediating any security vulnerabilities

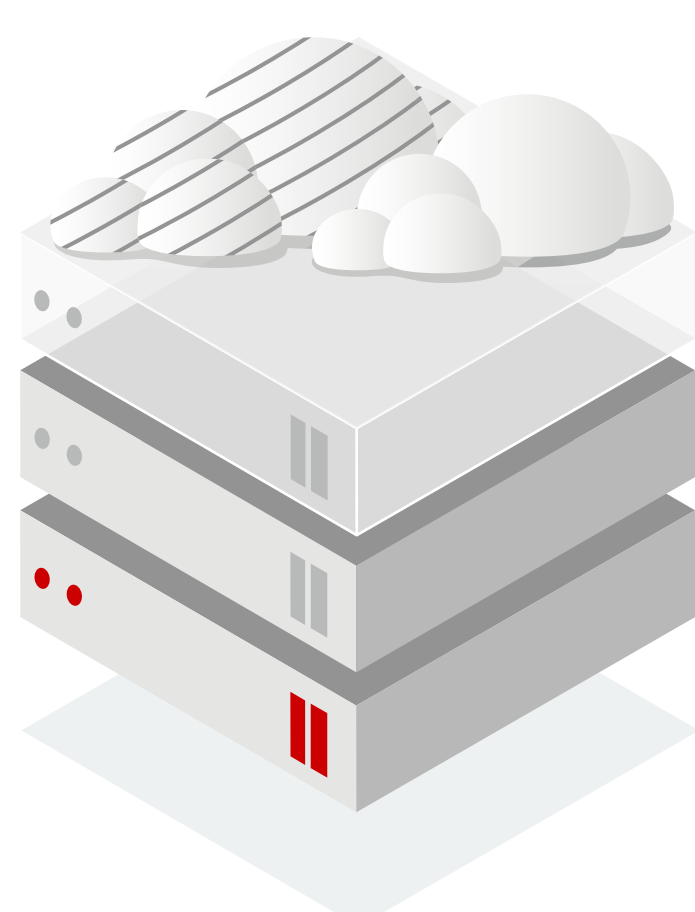

Overview

Introducing Red Hat Smart Management

Red Hat® Smart Management helps organizations optimize and manage their Red Hat Enterprise Linux® environments, adding a security-focused foundation for their IT infrastructure.

Why Red Hat Smart Management?

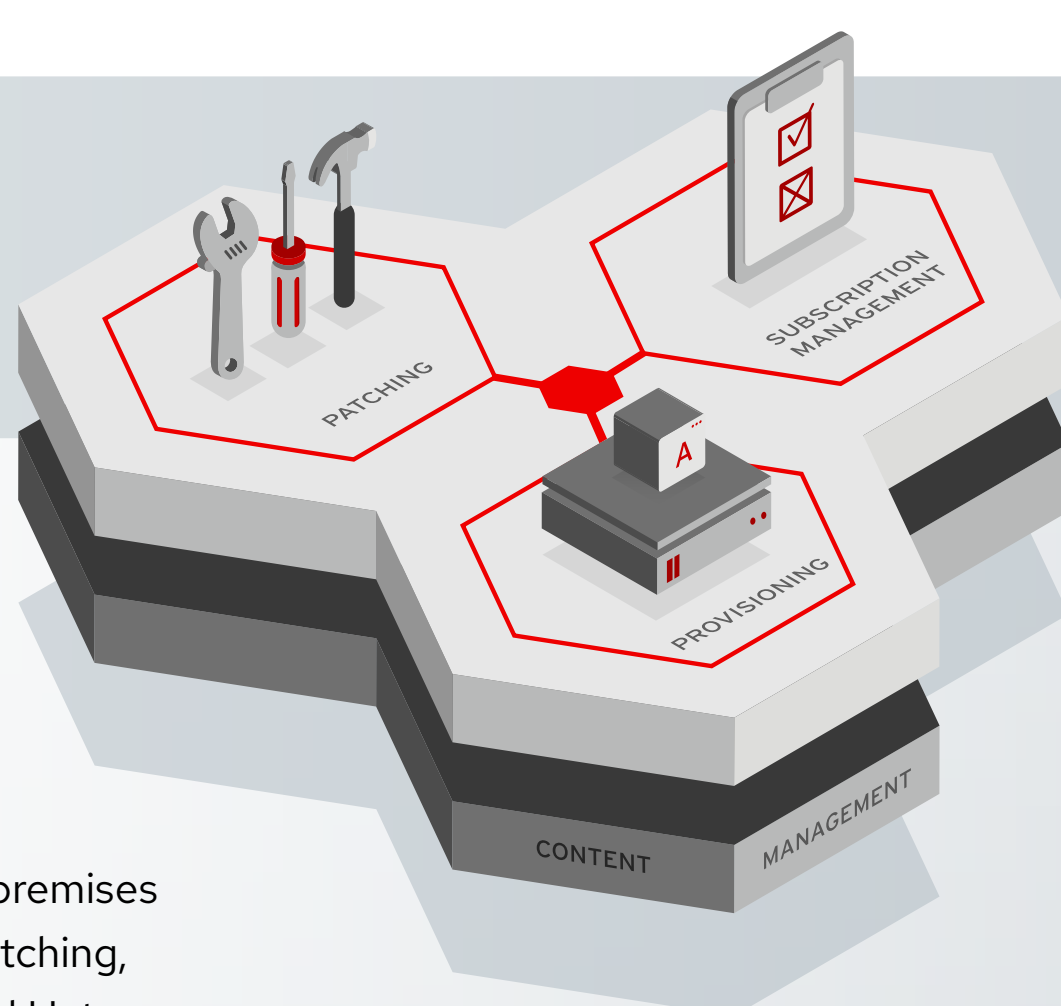

- » **FLEXIBILITY** to manage Red Hat Enterprise Linux on-premises or through the cloud
- » **Security** Covers your entire system and security management life cycle

What's included in Red Hat Smart Management?

Red Hat Satellite

Red Hat Satellite is a scalable platform (mainly for on-premises and air-gapped environments) designed to manage patching, provisioning, and subscription management of your Red Hat infrastructure, regardless of where it is running.

- » **Content management** Curate and distribute content and make it available to hosts.
- » **Provisioning** Provision to bare metal, virtual, private, and public clouds.
- » **Patching** Report on hosts that need updates, fixes, or enhancements and use automation to quickly patch multiple hosts all at once.
- » **Subscription management** Centrally manage subscription usage and maintain accurate deployment information.

Cloud management services for Red Hat Enterprise Linux

Cloud management services for Red Hat Enterprise Linux are hosted services that help customers optimize their Red Hat environment by addressing key challenges around security, compliance, and configuration.

- » **Easier to access and scale capabilities:**
 - No infrastructure to maintain
 - Register once
 - Faster access to updates

- » **Vulnerability** Assess, monitor, report, and remediate common vulnerability and exposures (CVEs) in your Red Hat environment.
- » **Compliance** Stay compliant by assessing, monitoring, reporting, and remediating industry-specific, noncompliance issues across your systems.
- » **System comparison** Easily compare environment configurations to identify differences and assist with troubleshooting.
