

Power SAP hybrid integration with Red Hat OpenShift

Red Hat was recognized by Gartner as a Leader in the [2024 Gartner® Magic Quadrant™ for Container Management](#).¹

Forrester Research identified Red Hat as a “Leader” in the [2023 Forrester Wave™ for Multicloud Container Platforms](#).²

Bring the power of SAP solutions to on-premise workloads

As organizations pivot to the use of new technologies from SAP, many face challenges in moving their sensitive data and workloads to the cloud. This is primarily due to security and compliance concerns, as well as decoupled operations, which lead many to seek a hybrid approach.

SAP Integration Suite—the [logical successor of SAP Process Integration/Process Orchestration \(PI/PO\)](#)—is a multicloud, hybrid integration platform that offers many benefits to organizations making this transition.

As part of SAP Integration Suite, SAP offers [Edge Integration Cell](#), a hybrid integration solution. SAP Edge Integration Cell allows organizations to design their application programming interfaces (APIs) and other integration content in the SAP cloud, and deploy and manage it in either the SAP cloud or on premise. This allows organizations to continue to store and process their sensitive data within their own local security frameworks, while also offering the ability to run disconnected, improving service resilience. This is increasingly important for key use cases in many industries such as industrial manufacturing, utilities, and beyond.

SAP Edge Integration Cell supports customers that use SAP Process Integration for ground-to-ground integration. It allows them to benefit from any of the newest additions to SAP Integration Suite while maintaining a hybrid posture with the option to run multiple integration cells, providing a powerful migration path for SAP Process Orchestration customers.

For SAP customers to benefit from the full value of these capabilities, they need to run SAP Edge Integration Cell upon an enterprise-grade platform that provides a trusted, comprehensive, and consistent hybrid approach in any delivery environment.

The value of running SAP Edge Integration Cell on Red Hat OpenShift

As part of a long-established partnership, SAP and Red Hat have collaborated through joint engineering and support to run SAP Edge Integration Cell upon Red Hat® OpenShift®, both in cloud environments and on premise.

Red Hat OpenShift is trusted by customers across industries. With built-in security features, dedicated support, a trusted software supply chain, and Red Hat Enterprise Linux® as the operating foundation, Red Hat OpenShift provides an ideal hybrid platform to support critical applications like SAP Edge Integration Cell.

Together, Red Hat OpenShift and SAP Edge Integration Cell provide SAP customers with the bridge they need between their sensitive data and the custom applications they are required to keep on premise, along with access to many of SAP's valuable tools that can only be accessed from the SAP cloud. They complement and expand the value of SAP's solutions beyond the core of SAP's cloud services, extending investments in cloud-native applications all the way to the intelligent edge.

Organizations that already use Red Hat OpenShift can benefit from using their existing platform to run SAP Edge Integration Cell, without adding IT complexity. For those who want to use a managed OpenShift instance, SAP also supports [Microsoft Azure Red Hat OpenShift](#).
