

Red Hat fuels digital transformation at Omnitracs

Logistics

Software

Red Hat® OpenShift®
Container Platform

Red Hat Ansible®
Automation Platform

Red Hat Open Innovation Labs

Omnitracs is the global pioneer of fleet management solutions for transportation and logistics companies.

Challenge

The transportation industry is undergoing a digital revolution and Omnitracs engaged Red Hat as the partner to help accelerate its own transformation efforts. Omnitracs wanted to build upon proven, cloud-native technologies with the backing of qualified support and expertise.

Solution

With Red Hat's expertise and guidance, Omnitracs embraced a shift from on-premise development technologies to cloud-native services, improving overall operations and creating a more collaborative development process culture. Omnitracs One, the company's fleet management app, benefits commercial fleets of all sizes through a superior driver experience, a comprehensive library of third-party integrations, device independence, and exchangeable data across operations.

Benefits

- Drove wholesale transformation across the Omnitracs One platform and the entire development process
- Improved reliability, scalability, and overall platform security
- Reduced development time to bring new features to market and address changing customer needs faster

"The key result from our successful collaboration with Red Hat is how we now approach technology as well as people and processes. We have re-engineered how we develop, test, secure, and deploy software."

Kent Norton
Chief Technology Officer
