

# Open more possibilities for your organization with Red Hat

Successful IT modernization depends on three key pillars: infrastructure standardization, automation, and application development and delivery.

No matter where you are in your modernization journey, Red Hat can help support these pillars and open new possibilities for your organization.

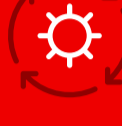

# 573%

three-year ROI realized by businesses using Red Hat subscription software.<sup>1</sup>

## Build a consistent infrastructure foundation

### Challenge

Many organizations struggle to deliver services quickly because of provisioning delays, downtime, and security and compliance gaps caused by the complexity of managing their IT infrastructure.

### How Red Hat can help

Red Hat helps you implement consistent and agile infrastructure in a standard operating environment (SOE) with an operating system (OS) that delivers enterprise support, out-of-the-box security features, and most importantly, the flexibility to support many IT environments.

### Outcome

Implementing an SOE helps your organization to:

-  Create consistent and agile infrastructure.
-  Reduce the complexity of infrastructure management.
-  Automate deployment and maintenance of servers and workstations.
-  Consistently operate workloads anywhere they run.

## Create a holistic automation strategy

### Challenge

Automation can be a valuable approach to managing complex IT architecture, but too many organizations use point solutions, which can increase costs, duplicate efforts, and build barriers between functions and departments.

### How Red Hat can help

Red Hat helps make end-to-end automation easier for you with solutions that use agentless technology and automation capabilities for configuration, provisioning, workflow orchestration, application deployment, and life cycle management across your entire IT infrastructure.

### Outcome

A holistic approach to automation helps your organization to:

-  Decrease your operational costs.
-  Lower the chances of human error.
-  Increase speed of application development and delivery.
-  Free up IT staff and budget for more valuable activities.

## Modernize application development and delivery

### Challenge

Many organizations struggle to increase application development velocity to stay competitive in a marketplace with ever-growing customer expectations, while simultaneously providing a consistent experience for developers.

### How Red Hat can help

Red Hat offers an application platform available as a fully managed cloud service from many major cloud providers for a unified experience across all clouds and consistent developer, life cycle, and upgrade support and billing experiences.

### Outcome

Implementing an application platform that allows you to use containerized deployments helps your organization to:

-  Reduce complexity and free teams to focus on business growth.
-  Increase hybrid cloud flexibility.
-  Accelerate app velocity to meet customer expectations.
-  Create a consistent experience for developers.
