

Red Hat virtual training

Instructor-led, real-time training in a virtual environment

Knowledgeable instructors

Red Hat virtual training is comparable to traditional classroom training based on satisfaction scores from our customers. Here is a sampling of what customers have said about Red Hat's virtual training instructors:¹

"The trainer really animates a VT [virtual training]. I was impressed by the quality of the course and the way he gave it. To be sure that we were still alive behind our computers, he did ready checks, questions, and so on. ... All that together made a great experience from my side."

"The trainer has an excellent level of expertise. This course was the good moment to arrive with questions to ask to understand better OpenShift."

"The instructor showed exceptional experience in the subject, answering all questions [and] not only limiting his knowledge to the book."

"The knowledge, experience and way of teaching of the instructor is awesome. Definitely the best Linux® training I've received ever."

Red Hat virtual training brings the classroom experience online

Red Hat® virtual training is real-time training conducted by Red Hat-certified instructors in a live, interactive, virtual environment. It gives you the same industry-respected content and hands-on labs as the corresponding classroom-based courses, including virtual lab machines that run actual products. Virtual training is an affordable, flexible solution for companies and individuals that allows you to train from your home or office, eliminating travel expenses.

Table 1. Key features of virtual training

Features	Benefits
Content	Course materials are the same as what you would learn in the corresponding classroom-based course taught by a virtual instructor.
Labs	You can access the same cloud-based, hands-on labs and environments from your device that you would use in an in-person classroom.
Instructors	In a live, online environment, you get the same certified, experienced instructors that you would have in a physical classroom environment.
Downloadable e-book	Virtual training provides you with a downloadable version of the course for review during and after the session.
Interaction	You can interact with the instructor and students through chat, audio, and video options. You can ask questions in a group setting or talk one on one with the instructor.
Dedicated support	Sessions have a group of technical support staff who will help resolve access and other technical issues before and during class.
Virtual environment	Virtual access eliminates travel expenses and enables teams to train together globally in a virtual environment from different locations.
Course length	Most classes offer 5½-hour increments per day over a 2- to 5-day period, which allows for partial work days.
